

Steps to install an operating system on a virtual machine :

Step 1: To install an operating system on virtual machine you need to first install an software for creating of virtual machine.

Step 2: Then after creating an virtual machine on the install software choose the virtual machine that you have create and name the the virtual machine.

Step 3: Here we already have the virtual machine player of the OS.

Step 4: It helps us to skip the installation part of the virtual machine.

Step 5: After selecting the OS here we use "metasploit" a lab OS. click the finish.

Step 6: open the virtual machine and start run to use it.
